

## Tab Saver User Guide

### Installation

- Go to the release section of Tab Saver's GitHub page, found at:  
<https://github.com/dougdelolio/opensource/releases>
- Locate the latest release and click on the source code to download it
- Once the file is finished downloading, unzip using tool of choice and move out of Downloads folder to another location in the file system
- Open Chromium web browser and click on the menu to the right hand side of the address bar
- Go to More Tools->Extensions, which will pop open a new tab
- Select Developer Mode in the upper right hand corner
- Click the 'Load Unpacked Extension...' button, which will bring up a modal window
- Navigate to wherever the extension was placed in the file system and click 'Select'
- Tab Saver will appear below with the other extensions and an icon will be added next to the address bar which can be clicked on to use the extension

### How To Use

- Current tabs that are open can be viewed at any time by pressing the icon which will open a popup. Open up a few tabs, press the popup, and look at the "Currently Viewing" section to view currently opened tabs. Close the browser. The tabs that were open will be moved into the history section. Re-open browser and look at the "History" section to view past history. Time and date are both recorded and entries are in sorted order.
- To open a link, right click the link and press either "Open link in new tab" or "Open link in new window".

- To remove a link, press the 'x' button next to the link and re-open the popup to refresh list.

### **Tab Summary**

- Each link that is present in the popup will have a short one sentence "summary" available for it. This will include the title of the webpage.
- Currently it is not displayed in the popup, but it is displayed in console. You can right click the popup and press "Inspect Popup" and you will be able to view the history for each link.
