at the moment, it seems like for loop in document.addEventListener('DOMContentLoaded', function ()
is not going in there... can you please check about it?

ealouie commented 20 hours ago

@ealouie @kakawangza modernizes the look of it. still working on the spacing between the title - can't seem to find the cause of it. let me know what you think.

Adds same tabs multiple times #10

[Open](#) ealouie opened this issue 14 days ago · 4 comments

ealouie commented 14 days ago

Collaborator

@dougdelolio @kakawangza

Testing out the Doug's latest commit ([f7c41a8](#)), I found that when I repeatedly clicked on the extension it would add the same tabs again (basically duplicate the first correct list, and append it to the bottom).

Steps to duplicate:
Open Chromium, click on extension, close extension, click on extension again (this time it should be correct with only one set of tabs in the history), close extension again, open extension again (this is when there should be an identical list appended to the bottom), and then it keeps repeating when you do that.

 ealouie added the **bug** label 14 days ago

ealouie commented 14 days ago

Collaborator

I think it would be more apparent what was going on if the state of the tabs was updated, and that was posted as opposed to it repeatedly being appended to the bottom (especially if you have exactly the same tabs open)? Maybe that is just me though. I'll look into a way to do that unless you guys like it the way it is.

dougdelolio commented 14 days ago

Owner

The reason it is being added over and over is because I call the function `addtohistory()` everytime the popup is pressed. What we need to do is read when chrome is closed and only call the function once just before the exit. That was something I couldn't quite figure out how to do. I can look at it again soon

ealouie commented 14 days ago

Collaborator

Yeah, I'm looking into it now. I'll let you guys know what I find.

ealouie commented 14 days ago

@dougdelolio Just found the Chrome sessions API (<https://developer.chrome.com/extensions/sessions>). Could this make everything a lot simpler?

Saving on close #9

[Open](#) dougdelolio opened this issue 14 days ago · 5 comments

dougdelolio commented 14 days ago

Owner

Need a way to figure out when a window is closed, to save the data.

kakawangza commented 14 days ago

Collaborator

<https://developer.chrome.com/extensions/storage>

How about use local storage?

2015. 11. 23. 오전 10:32에 "Doug Dellolio" <notifications@github.com>님이 작성:

dougdelolio commented 14 days ago

Owner

Sorry, I should have been more clear. The data saves properly, but when I close the window and open the popup twice, the data is deleted. #8

kakawangza commented 14 days ago

Collaborator

What do u mean close window and open pop up

2015. 11. 23. 오전 11:07에 "Doug Dellolio" <notifications@github.com>님이 작성:

dougdelolio commented 14 days ago

Owner

check out my branch feature/storage and my PR #8 . please see if you can figure it out. if you open up a few tabs, and press the extension you will see that it saves. now close chrome and reopen and press the popup. it removes the data on the second press.

dougdelolio commented 14 days ago

Owner

@kakawangza @ealouie i fixed it. so right now what it does is this;

everytime you press the popup it saves the tabs that are opened. you can open and reopen chrome and the data will still be there. so now we just want to save the tabs on close. i will keep trying at it and let you know
